

31. (New) An article for fabricating large liquid crystal displays comprising a flat cover plate and flat back plate bonded together wherein one of the plates has a smaller surface area than that of the other of the plates;

sub C1
B2
said plates are bonded together by an adhesive located between said plates over the entire area of the smaller area surface; said adhesive being void-free and exhibiting a wave undulating profile at the edges of the smaller surface.

32. (New) The article of claim 31 wherein said adhesive is a cured thermosetting adhesive.

33. (New) The article of claim 31 wherein the flat plates are glass.

34. (New) The article of claim 31 wherein the adhesive had a viscosity of less than 30,000 centipoise and is self leveling in the uncured state.

35. (New) The article of claim 31 wherein the adhesive had a viscosity of about 1,000 centipoise in the uncured state.

36. (New) The article of claim 34 wherein the adhesive is an acrylic adhesive.

37. (New) The article of claim 34 wherein the adhesive is a silicon.

38. (New) The article of claim 34 wherein the adhesive is a urethane acrylate.

REMARKS/ARGUMENTS

Claims 31-38 are now in the application.

The objection to the specification has been overcome by the amendment to the specification.

The rejection of claims 28-30 under 35 U.S.C. 112, second paragraph is not deemed tenable, since the claims now in the application do not recite "like,"
